## INTRODUCTION

The Western lines of the Canadian Pacific Railway at the present time extend from Port Arthur and Fort William, on the shores of Lake Superior in the East, to Port Alberni, on Vancouver Island, in the West, covering part of Western Ontario and the whole of the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia. On its journey across the continent the railway opens up a territory rich in raw material, destined for the development of every kind of commercial enterprise. The enormous increase year by year in land settlement demands a contributory increase in industrial development. The market for the manufactured article is within the territory of its manufacture, and merely awaits the further investigation on the part of the capitalist.

Each year new towns come into existence; each year the demand for supplies grows greater; each year the importation of merchandise that could be manufactured in the country is steadily increasing.

The Canadian Pacific Railway, with its 1,400 Cities, Towns, and Villages in the West, opens up a tremendous field for commercial development. The retailer is demanded at every point, the wholesaler at strategic corners, where he is able to cover a large expanse of settled country; the manufacturer in the cities where the wholesale man takes the larger part of his output. For the manufacturer, the water-powers of the Western rivers, the coal deposits of British Columbia, Alberta and Saskatchewan,

and the Natural Gas fields of Alberta, constitute a means by which the raw material may be turned into the finished product with economic success and in competition with the products of any country in the world.

The best illustration of the demand for factories in the West may perhaps be found in the list of imports shown in the annual summary, issued by the Dominion Government, and for which Canada is at the present moment sending millions of dollars out of the country.

The total imports for the year ending March, 1913, amounted to \$675,428,168, of which \$670,000,179 represent merchandise, and \$5,427,168 coin and bullion.

Among the articles imported, in the composition of which the raw material lies right at our door, are the following:

Brick, tiles, clay and manufactures of .....	\$ 3,631,488
Carriages, carts, wagons, etc. ....	20,802,322
Cordage, rope and twine .....	2,979,239
Earthenware, china and graniteware .....	3,265,180
Flax, hemp, jute and manufactures of .....	8,794,963
Glass .....	5,322,690
Gloves and mitts .....	2,793,606
Leather and manufactures of .....	9,601,577
Brass and manufactures of .....	5,288,082
Copper and manufactures of .....	7,548,530
Iron and steel and manufactures of .....	138,648,364
Paper and manufactures of .....	8,347,381
Soap .....	1,335,517
Sugar, molasses, etc. ....	20,591,488
Wood and manufactures of .....	28,515,039
Bread stuffs .....	11,633,315

\$16,459,940 were spent on fruits, a large proportion of which would be citrus fruits; yet the amount of fresh fruits imported into Western Canada is too great when cognizance is taken of the large tracts of fruit-growing lands in British Columbia, which produce, where cultivated, the finest apples, pears, plums, peaches, and abundance of small fruits.

\$3,242,214 were spent on imported vegetables in a country which can produce the finest garden truck, and is suited in every way to the cultivation of all vegetables.

\$33,649,791 were spent on wool and its manufactures, yet the sheep industry is one that lends itself particularly well to development in the West, and the earlier settled Province of Manitoba demands the sheep industry to bring back to parts of it that clean soil so essential to good farming. The report of the Commissioners appointed to investigate the sheep industry of Canada, Great Britain and the United States, and published November 1st, 1911, discloses the fact that in Canada there were, at the time of investigation, but 2,106,000 head. In Great Britain 31,852,772; New Zealand, 23,792,947; Australia, 92,241,226 sheep of shearing age; Argentine, 67,211,754; and United States of America, 51,216,000 including lambs. The Province of Manitoba alone could easily take care of all the sheep in the whole of Canada, and yet with its 41,169,098 acres had but a sheep population of 42,000 head.

The Dominion Government has for the last few years and still is engaged on a survey of the clay and shale deposits in the West, and from a summary report already issued it would appear evident that every kind of clay product can be manufactured. The demand for building material outstrips the supply by many thousands of dollars annually, and thus there is a great field open for the manufacture of all clay products, and cement and its products, the huge deposits of lime rock in Alberta and British Columbia being eminently suitable to this industry.

The campaign which is now proceeding with a view to encourage a greater proportion of mixed farming farmers, will have a tendency to gradually increase the number of head of live stock. With a population of nearly 2,000,000, Western Canada is at the present time (notwithstanding the marvellous productiveness of its land) importing a large proportion of its necessary food products from the United States and the East.

The Provinces of Alberta, Saskatchewan and Manitoba, during the year 1912, produced 12,012,043 pounds of butter, valued at \$3,113,162. It is estimated that the three Provinces produced potatoes valued at \$6,303,000, turnips and other roots \$3,819,000, hay and clover \$5,226,000, alfalfa \$325,000. The sugar beet as grown in Alberta is manifestly successful and produced 15,000 tons of sugar beets valued at \$75,000 last year, but there is a much larger scope for this and other industries at the present time, with an exceedingly profitable future. Not nearly sufficient is being produced to take care of the home market, in addition to which there is a large outside market to provide for, with products which should, and can, be grown to perfection in the West.

The Canadian Pacific Railway has now completed the construction of the Kootenay Central Line up the Columbia Valley as far as Spillimachene, and the balance of the line is under contract for completion through to the Crow's Nest Branch at Colvalli. This line is opening up a magnificent territory for the Fruit Rancher, Farmer, Stock and Poultry Raiser, as well as all kinds of vegetables, lumbering, mining, etc. The town of Invermere on Lake Windermere is the centre of Railroad construction activity and advantage should be taken of the opportunities offered to the Retailer and Settler who is prepared to make the Valley his home.

Following is a short synopsis of the provinces, together with a statement of their natural products.

## WESTERN ONTARIO

From the Western shores of Lake Superior to the Eastern boundary of Manitoba is a great stretch of timbered lands, underlying which are deposits of iron, gold, clay, gravel and sand. The product of the iron ranges which are tributary to the lake ports, are being developed, and the iron ore used at the blast furnaces at Port Arthur. The gold mining claims south of Dryden and at Kenora are being exploited. The water powers of this part of the province are estimated to produce 237,347 h.-p., but so far have only been developed at Current River, Kakabeka Falls and Kenora. The cities of Port Arthur and Fort William during the season of navigation, handle the huge grain crop of the West, which is shipped out over the lakes, and the freighters bring back a large tonnage of coal and merchandise. The paper pulp industry is being developed at Dryden, and Keewatin and Kenora are large flour milling centres.

Surrounding the Twin Cities of Port Arthur and Fort William there is estimated to be 100,000 acres of rich agricultural land suitable for grain growing, dairy farming, and all vegetables. The industrial development of these cities creates a large market for all agricultural produce grown locally.

## MANITOBA

This Province extends from the International Boundary to the shores of the Hudson Bay, and covers a territory rich in agricultural products. It has an area of 251,832 square miles, and is traversed by the Red, Winnipeg, Assiniboine, Nelson and Churchill Rivers. The newly added territory to the north has not yet been sufficiently explored to state with any certainty its wealth, but there are large stretches of timber, big clay deposits as well as minerals. The water powers are estimated to produce 6,916,000 h.-p., of which 78,000 has already been developed, principally for the city of Winnipeg. The lakes of Manitoba, which are so famous for their white fish, are Winnipeg, Winnipegosis and Manitoba.

The present principal products of the province are wheat, oats, barley, flax, roots, vegetables, live stock, poultry, dairying, cultured and domestic grasses, gypsum, clay, shale, limestone, gravel, sand, white fish, timber, etc. The construction of locks on the Red River, near Winnipeg, has opened up navigation through to Lake Winnipeg, and a large traffic is being developed. The estimated population of the province at the end of 1912 was 475,614.

## SASKATCHEWAN

Has an area of 250,660 square miles, and is traversed by the North and South Saskatchewan Rivers, with the Churchill River in the North, and the Qu'Appelle and Souris Rivers in the centre and south. The larger lakes are the Athabasca, Reindeer, Wollaston, Quill and Last Mountain.

The water powers are estimated to produce 470,200 h.-p., but at the present time are practically undeveloped.

The estimated population of the province at the end of 1912 was 550,000.

The province has established a record for wheat growing, and amongst its present products are wheat, oats, barley, flax, cultivated and domestic grasses, roots, vegetables, live stock, poultry, dairying, lignite coal, timber, clay, shale, gravel, sand, etc.

## ALBERTA

In area 253,570 square miles. Is the home of the Natural Gas field, and has coal beds underlying the larger part of the province. The Canadian Pacific Railway is bringing under irrigation a large tract of 3,000,000 acres, at a cost of some \$11,500,000. The lands so irrigated have proved successful in producing every kind of grain, alfalfa and other fodders, sugar beets, vegetables, etc.

The principal rivers are the Peace, Athabasca, Bow and Red Deer. The lakes, Athabasca, Lesser Slave, Lac La Biche and numerous smaller ones.

Water powers are estimated to produce 1,137,060 h.-p., of which only about 7,300 h.-p. has been developed. The present products of the province are wheat, oats, barley, flax, alfalfa, roots, vegetables, live stock, poultry, dairying, sugar, coal, natural gas, cement, clay, gravel, sand, limestone, timber, etc.

The estimated population of the province at the end of 1912 was 500,000.

## BRITISH COLUMBIA

Contains about 395,610 square miles. It is traversed from north to south by four principal mountain ranges—the Rocky and Selkirk ranges in the east, and the Coast and Vancouver ranges in the west.

There is a Coast line of some 1,000 miles, with many fine harbors, in and out of which ocean liners carry merchandise and passengers to all parts of the world.

The principal rivers are the Columbia, Fraser, North and South Thompson, Skeena, Kootenay, Stikine, and the Peace.

The lakes are Atlin, Kootenay, Okanagan, Upper and Lower Arrow, Quesnel, Shuswap, Adams and many others.

The water powers are estimated to produce 2,045,945 h.-p., of which some 137,000 h.-p. has been developed.

The estimated population of the province at the end of 1912 was 491,576.

The principal products are coal, gold, silver, copper, lead, zinc, timber, furs, fish, oil, hops, fruit, vegetables, wheat, oats, barley, hay and cultivated grasses, marble, granite, limestone, gypsum, clay, shale, gravel, sand, etc.

The mineral production of the province for the year 1912 is estimated to be \$32,606,000, being an increase of \$9,106,928 over 1911. The values were as follows:

Gold .....	\$ 5,460,800
Silver .....	1,676,200
Lead .....	1,520,000
Copper .....	8,338,500
Zinc .....	501,500
Coal .....	9,275,000
Coke .....	1,584,000
Building materials .....	4,250,000

Vancouver Island, with its ports of Victoria, Nanaimo and Alberni, is building up an immense shipping trade to all parts of the world. The island is tremendously rich in timber and minerals. Vancouver Island coal is the highest grade of coal available on the Pacific Coast, and is used largely as a fuel for steamers engaged in the Coast and Oriental trades. Every kind of agricultural pursuit is carried on and the nearby seas are developing large fisheries.
